

# Vascular Model Repository

## Specifications Document

190529\_P6

<b>Species</b>	Mouse
<b>Anatomy</b>	Coronary
<b>Disease</b>	Wild-type, non-injured
<b>Procedure</b>	-

# Clinical Significance and Background

## Coronary

Coronary arteries supply blood to the heart muscle. Like all other tissues in the body, the heart muscle needs oxygen-rich blood to function. Also, oxygen-depleted blood must be carried away. The coronary arteries wrap around the outside of the heart. Small branches dive into the heart muscle to bring it blood. The two main coronary arteries are the left main and right coronary arteries.

The left main coronary artery (LCMA) supplies blood to the left side of the heart muscle (the left ventricle and left atrium). The left main coronary then divides into branches: The left anterior descending artery which supplies blood to the front of the left side of the heart and the circumflex artery which encircles the heart muscle supplies blood to the outer side and back of the heart.

The right coronary artery (RCA) supplies blood to the right ventricle, the right atrium, and the SA (sinoatrial) and AV (atrioventricular) nodes, which regulate the heart rhythm. The right coronary artery divides into smaller branches, including the right posterior descending artery and the acute marginal artery. Together with the left anterior descending artery, the right coronary artery helps supply blood to the middle or septum of the heart.

## Clinical Data

### General Patient Data

Age (yrs)	0.016438356
Sex	-

### Specific Patient Data

Condition	wild-type, non-injured
-----------	------------------------

## Notes

Medical images in this project have been compressed to reduce the download size. High-definition medical images can be downloaded [here](#). \nWarning: Size of folder is 14.6 GB. \nSee [DOI](#) for more details. See below for information on the image data and

boundary conditions associated with the model.

**Image Modality:** Ultramicroscope II, light sheet microscopy

**Image Source:** Stanford

## Publications

See the following publications which include the featured model for more details:

Anbazhakan, S., Coronado, P. E. R., Sy-Quia, A. N. L., Seow, A., Hands, A. M., Zhao, M., ... & Red-Horse, K. (2021). Blood flow modeling reveals improved collateral artery performance during mammalian heart regeneration. bioRxiv.
