# Clinical Significance and Background

## Aorta

The aorta is the main and largest artery in the human body, originating from the left ventricle of the heart and extending down to the abdomen, where it splits into two smaller arteries (the common iliac arteries). The aorta distributes oxygenated blood to all parts of the body through the systemic circulation.

The aortic arch loops over the left pulmonary artery and the bifurcation of the pulmonary trunk. In addition to these blood vessels, the aortic arch crosses the left main bronchus. The aortic arch has three major branches: from proximal to distal, they are the brachiocephalic trunk, the left common carotid artery, and the left subclavian artery. The brachiocephalic trunk supplies the right side of the head and neck as well as the right arm and chest wall, while the latter two together supply the left side of the same regions.

## Clinical Data

### General Patient Data

Age (yrs)	11
Sex	Male

## Notes

See below for information on the image data and boundary conditions associated with the model.

**Image Modality:** CT

**Image Type:** DICOM

**Image Source:** TLAB

**Image Manufacturer:** SIEMENS

**Boundary Conditions:** Refer to boundary conditions in the SimVascular file.

## Publications
